# Transmitter Identification

A typical data plate is shown in Figure 1. Review the model code on the data plate attached to your transmitter to determine its electrical, pressure, and hazardous location ratings.

*Figure 1. Sample Transmitter Identification*

Letter	Description	Reference
A	Model Code	See PSS 2A-1C13 P.
B	Electrical Safety Design Code	See "Electrical Certification Rating" on page 6.
C	Supply Voltage	See "Supply Voltage" on page 6.
D	Data Plate	See "Electrical Certification Rating" on page 6.
E	Origin Code	See "Origin Code" on page 17.
F	Pressure Rating	See "Pressure Rating" on page 13.

## Supply Voltage

The proper supply voltage is printed on the data plate. See Item C on the example shown in Figure 1. Ensure that the proper electrical source is connected to the transmitter.

## Electrical Certification Rating

The electrical safety design code is printed on the data plate as part of the model code. See Items A, B, and D in Figure 1.

Table 1 describes the ATEX electrical specifications, and Table 2 describes the IECEx electrical safety specifications. The type of protection is also marked on the data plate (Item D in Figure 1).

---

### — NOTE —

These transmitters have been designed to meet the electrical safety descriptions listed in Table 1 and Table 2. For detailed information or status of testing laboratory approvals/certifications, contact Invensys.

---

*Table 1. ATEX Electrical Safety Specifications*

Testing Laboratory, Types of Protection, and Area Classification	Models	Electronic Version	Application Conditions	Electrical Safety Design Code
<b>ATEX</b> intrinsically safe; Ex ia IIC, Zone 0	IAP10S, IGP10S	T	Temperature Class T4, T85°C, Ta = -40 to +80°C. See certificate SIRA 13ATEX2012X for electrical data.	AA
<b>ATEX</b> flameproof; Ex d IIC, Zone 1	IAP10S, IGP10S	T	Temperature Class T6, T85°C, Ta = -40 to +75°C. See certificate SIRA 13ATEX1013X for electrical data.	AD
<b>ATEX</b> protection n and ic; Ex nL IIC, Zone 2	IAP10S, IGP10S	T	Temperature Class T4, T85°C, Ta = -40 to +80°C. See certificate SIRA 13ATEX4014X for electrical data.	AN
<b>ATEX</b> multiple certifications, ia and n. Refer to codes AA and AN for details.	IAP10S, IGP10S	T	See note (a)	AM
<b>ATEX</b> multiple certifications, ia, d, and n. Refer to codes AA, AD, and AN for details.	IAP10S, IGP10S	T	See note <sup>(a)</sup>	AP

- a. User must permanently mark (check the rectangular block on the data plate) one type of protection only (ia, d, or n). This mark cannot be changed once it is applied. See Item D on the example shown in Figure 1.

*Table 2. IECEx Electrical Safety Specifications*

Testing Laboratory, Types of Protection, and Area Classification	Models	Electronic Version	Application Conditions	Electrical Safety Design Code
<b>IECEx</b> intrinsically safe; Ex ia IIC	IAP10S, IGP10S	T	Temperature Class T4, T85°C, Ta = -40 to +80°C. See certificate IECEx SIR 13.0031X for electrical data.	EA
<b>IECEx</b> flameproof; Ex d IIC	IAP10S, IGP10S	T	Temperature Class T6, T85°C, Ta = -40 to +75°C. See certificate IECEx SIR 13.0033X for electrical data.	ED
<b>IECEx</b> protection n; Ex ic IIC or Ex nA	IAP10S, IGP10S	T	Temperature Class T4, T85°C, Ta = -40 to +80°C. See certificate IECEx SIR 13.0032X for electrical data.	EN
<b>IECEx</b> multiple certifications, ia and n. Refer to codes EA and EN for details.	IAP10S, IGP10S	T	See note (a)	EM
<b>IECEx</b> multiple certifications, ia, d, and n. Refer to codes EA, ED, and EN for details.	IAP10S, IGP10S	T	See note <sup>(a)</sup>	EP

- a. User must permanently mark (check the rectangular block on the data plate) one type of protection only (ia, d, or n). This mark cannot be changed once it is applied. See Item D on the example shown in Figure 1.

## Entity Parameters

### For Electrical Safety Design Codes AA and EA

The entity parameters for the supply and output circuit (terminals + and -) in the type of explosion protection intrinsic safety Ex ia IIC, only for connection to a certified intrinsically safe circuit with the following maximum values are:

$$\begin{aligned} U_i &= 30 \text{ V} \\ I_i &= 110 \text{ mA} \\ P_i &= 800 \text{ mW} \end{aligned}$$

# Warnings

## General Warnings

### **⚠ WARNING**

1. Transmitters must be installed to meet all applicable local installation regulations, such as hazardous location requirements, electrical wiring codes, and mechanical piping codes. Persons involved in the installation must be trained in these code requirements to ensure that the installation takes maximum advantage of the safety features designed into the transmitter.
2. A plug is supplied with each transmitter with 1/2 NPT conduit connection. It is intended to provide moisture ingress protection of the unused housing conduit entry. The plug must be wrench tight to achieve this level of protection. Thread sealant is required. Explosion-proof applications may require a certified plug. Housings with M20 threaded conduit connections are provided with an ATEX certified plug. Thread sealant is required to provide moisture ingress protection.
3. To install a transmitter labeled with multiple approvals, select and permanently mark the certification label in the tick block to distinguish the installed approval type from the unused approval types. Once installed, the transmitter **cannot** be reinstalled using any other approval type. Not following these instructions will jeopardize explosion safety.

### **⚠ WARNING**

1. When used in a dust zone with flammable dusts, fibers, and flyings in groups IIIA, IIIB or IIIC, the layer auto-ignition temperature shall be at least 75°C above the maximum surface temperature marked in the dust coding.
2. The equipment is only certified for use in ambient temperatures marked on the equipment and should not be used outside this range.
3. The maximum process pressure indicated on the marking must not be exceeded.
4. Installation shall be carried out in accordance with the applicable code of practice (typically IEC 60079-14) by suitably trained personnel.
5. There are no special checking or maintenance conditions. All explosion-protected equipment should be periodically inspected in accordance with the applicable code of practice (typically IEC 60079-17). The interval between inspections should not normally exceed 3 years, unless justification for a longer interval is given.
6. With regard to explosion safety, it is not necessary to check for correct operation.
7. The equipment contains no user-replaceable parts and is not intended to be repaired by the user. Repair of the equipment is to be carried out by the manufacturer, or their approved agents, in accordance with the applicable code of practice.

## Intrinsically Safe Warnings

### **⚠ WARNING**

---

1. Where necessary, intrinsically safe equipment may be connected and disconnected while the circuits are energized.
  2. The certificate numbers have an 'X' suffix which indicates that special conditions of installation and use apply. Those installing or inspecting this equipment must have access to the contents of the certificate or these instructions. The conditions listed in the certificate are reproduced below:
    - i. Some models have the main electronics enclosure manufactured from aluminum alloy. In rare cases, ignition sources due to impact and friction sparks could occur. This shall be considered during installation, particularly if the equipment is installed in a zone 0 location.
    - ii. When installed in flammable dust zones, under certain extreme circumstances an incendive electrostatic charge may build up on the painted surfaces, which are non-conducting. Therefore, the user/installer shall implement precautions to prevent the build up of electrostatic charge, for example, to place the equipment in a location where a charge-generating mechanism (such as wind-blown dust) is unlikely to be present and clean with a damp cloth.
    - iii. When installed in a flammable dust zone, the installer shall ensure that the cable entry maintains the dust-tightness (IP6X) of the enclosure.
- 

## Type n Warnings

### **⚠ WARNING**

---

1. The equipment is marked "Do not open when energized". However, if the equipment is powered from an intrinsically safe supply (that is, installed under "Ex ic" protection), then live working is permitted and the enclosure can be opened without first isolating the supply.
  2. The certificate numbers have an 'X' suffix which indicates that a special condition of installation and use applies. Those installing or inspecting this equipment must have access to the contents of the certificate or these instructions. The condition listed in the certificate is reproduced below:
    - i. The temperature of the branching point of the cable entry is 3°C above the ambient temperature. The temperature rating of the cable shall be considered if the equipment is installed in a high ambient temperature.
  3. On transmitters certified for ATEX or IECEx protection n, the threaded housing covers must be installed.
-

## Explosionproof/Flameproof and Enclosure Warning

### **⚠ WARNING**

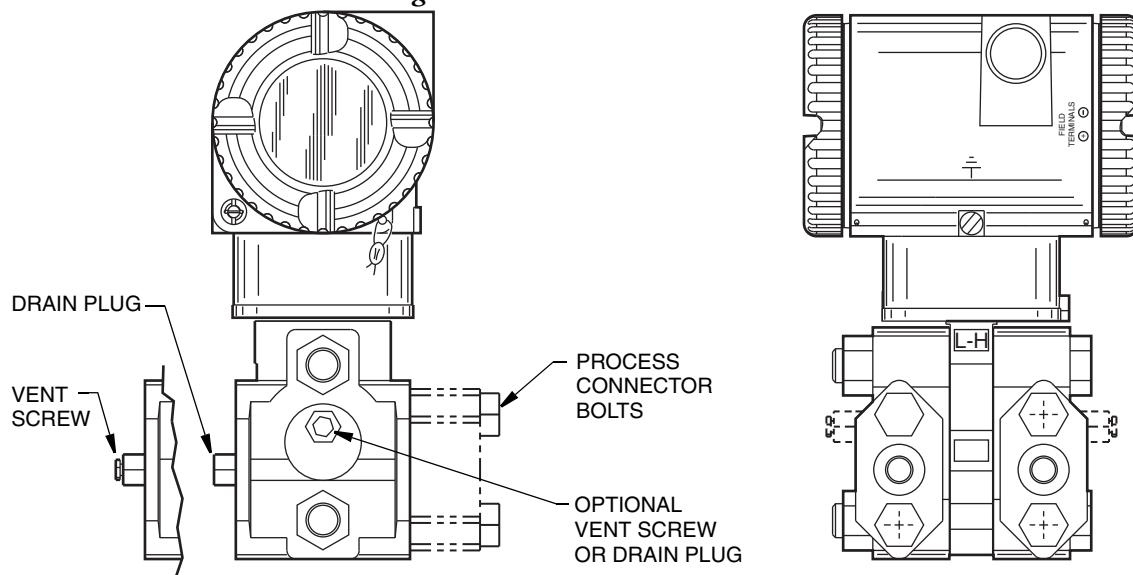

1. To prevent possible explosion and to maintain explosionproof/flameproof and dust-ignitionproof protection, plug unused openings with a certified metal pipe plug. For 1/2 NPT connections, both the plug and conduit must be engaged a minimum of five full threads. For M20 connections, the certified plug provided and the conduit must be engaged a minimum of seven full threads.
2. The threaded housing covers must be installed. Turn covers to seat O-ring into the housing and then continue to hand tighten until the cover contacts the housing metal-to-metal.
3. If the electronics housing is removed for any reason, it must be hand tightened fully. Then engage the set screw until it bottoms out and **back it off 1/8th turn**. Fill the set screw recess with red lacquer (Foxboro Part number X0180GS or equivalent). The housing then may be rotated up to one full turn in a counterclockwise direction for optimum access to adjustments.

## Pressure Warnings

### **⚠ WARNING**

When installing your transmitter, tighten process connector bolts to a torque of 61 N•m (45 ft•lb) and drain plugs and optional vent screws to 20 N•m (15 ft•lb). See Figure 2.

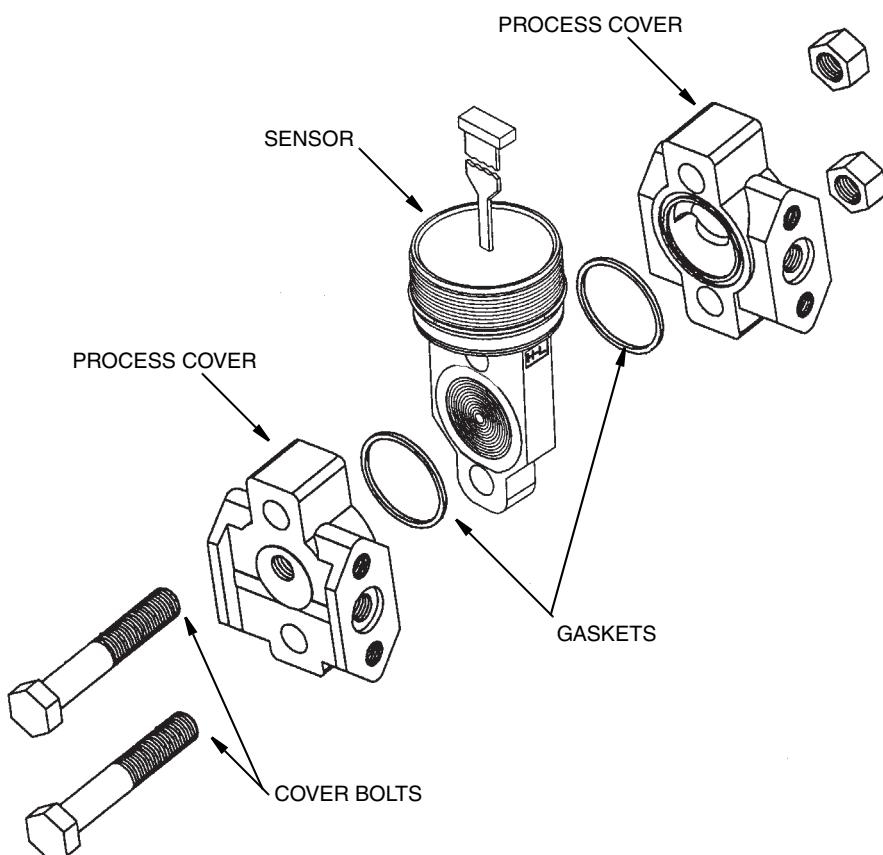

*Figure 2. Pressure Connections*

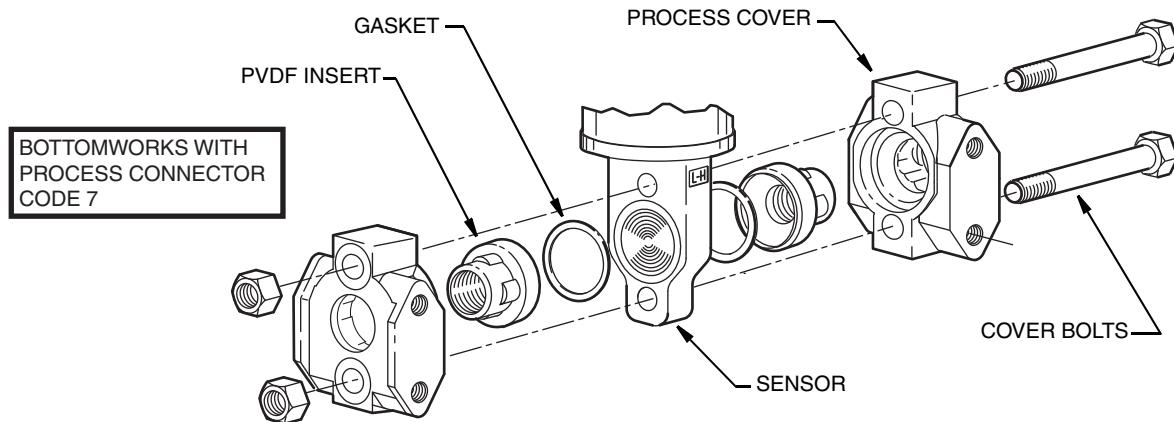

**⚠ WARNING**

If a sensor is replaced or process covers are rotated for venting, replace the gaskets and torque the cover bolts (see Figure 3 and 4) to 100 N•m (75 ft•lb) in several even increments. Torque values are 66 N•m (50 ft•lb) when optional 316 ss bolts are specified (option B1). A pressure test is required. Perform a hydrostatic test with a liquid following proper hydrostatic test procedures. Pressure test the process cover assembly by applying a hydrostatic pressure of 150% of the maximum static and overrange pressure rating to both sides of the process cover/sensor assembly simultaneously through the process connections. Hold pressure for one minute. There should be no leakage of the test fluid through the gaskets.

*Figure 3. Sensor Replacement*

*Figure 4. Sensor Replacement (PVDF Inserts)*

## Process Fluid Warning

### **⚠ WARNING**

If process containing parts are to be disassembled:

1. Make sure that process fluid is not under pressure or at high temperature.
2. Take proper precautions concerning leakage or spillage of any toxic or otherwise dangerous fluid. Follow any Material Safety Data Sheet (MSDS) recommendations.

## Seal Fill Fluid Warning

### **⚠ WARNING**

Even though the volume of seal fluid is small, be sure that the fill fluid can mix safely with the process fluid.

## Parts Replacement Warning

### **⚠ WARNING**

This product contains components that have critical safety characteristics. Do **not** substitute components. Replace components only with identical factory supplied components. Component substitution may impair the electrical safety of this equipment and its suitability for use in hazardous locations.

## PED Certification

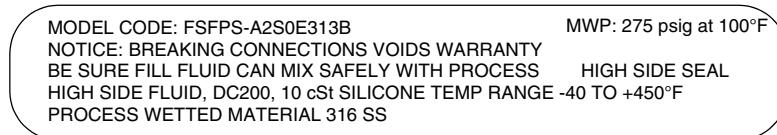

Invensys offers the PED (Harmonized Pressure Equipment Directive for the European Community) certification only with transmitters ordered with ATEX Electrical Safety Design Code selections. Transmitters with PED certification have a CE marking on the data plate that also carries the PED number 0575.

## Pressure Rating

The maximum working pressure (PS or MWP) for the transmitter is printed on the data plate. See Item F on the example shown in Figure 1.

The data plate of flanged level transmitters and transmitters with flanged pressure seals are stamped with the MWP if the transmitter pressure range is the limiting factor. It is stamped “Flange Rate” if the flange rating is the limiting factor. The MWP of the flanged seal is stamped on the seal data plate. See Figure 5.

*Figure 5. Sample Seal Data Plate*

When using transmitters with threaded, in-line saddle weld, or sanitary pressure seals, compare the MWP of the transmitter on the transmitter data plate and the MWP of the seals on the seals data plates and use the lesser value as the system MWP.

The MWP on the seal data plates may not be given at your process temperature. Use the following information and industry standards as required to determine the actual pressure limits for your application.

## Pressure Seal PSFLT

*Table 3. Pressure Seal PSFLT Pressure Limits*

ANSI Carbon Steel and 316L SS Flanges (a)						
Process Temperature (b)	Maximum Working Pressure: Carbon Steel (c)			Maximum Working Pressure: 316L SS (d)		
	Class 150	Class 300	Class 600	Class 150	Class 300	Class 600
-20 to 100°F	285 psig	740 psig	1480 psig	275 psig	720 psig	1440 psig

400°F	200 psig	635 psig	1265 psig	195 psig	515 psig	1025 psig
500°F	170 psig	605 psig	1205 psig	170 psig	480 psig	955 psig
600°F	140 psig	570 psig	1135 psig	140 psig	450 psig	900 psig
DIN Carbon Steel and 316 SS Flanges (e)						
Process Temperature <sup>(b)</sup>	Maximum Working Pressure: Carbon Steel <sup>(c)</sup>			Maximum Working Pressure: 316L SS <sup>(d)</sup>		
	PN 10/40	PN 10/16	PN 25/40	PN 10/40	PN 10/16	PN 25/40
-10 to +100°C	40 bar	16 bar	40 bar	40 bar	16 bar	40 bar
150°C	37.5 bar	14.5 bar	37.5 bar	36.3 bar	14.5 bar	36.3 bar
200°C	35 bar	13 bar	35 bar	33.7 bar	13.4 bar	33.7 bar
250°C	32 bar	11 bar	32 bar	31.8 bar	12.7 bar	31.8 bar
300°C	30 bar	9 bar	30 bar	29.7 bar	11.8 bar	29.7 bar
350°C	27.8 bar	7.5 bar	27.8 bar	28.5 bar	11.4 bar	28.5 bar

- a. ANSI flanges per ASME/ANSI B16.5 - 2003.
- b. Flange temperature/pressure ratings only; seal temperature ratings may be lower depending on mounting and fill fluid. Refer to Table 10.
- c. ASME/ANSI Material Group 1.1; Linear Interpolation acceptable.
- d. ASME/ANSI Material Group 2.2; Linear Interpolation acceptable.
- e. DIN flanges per EN 1092-1.

## Pressure Seals PSFAR and PSFAD

*Table 6. Pressure Seal PSFAR and PSFAD Pressure Limits*

ANSI Carbon Steel and 316L SS Flanges (a)								
Process Temperature (b)	Maximum Working Pressure (c): Carbon Steel (d)				Maximum Working Pressure (c): 316L SS (e)			
	Class 150	Class 300	Class 600	Class 1500	Class 150	Class 300	Class 600	Class 1500
-20 to 100°F	285 psig	740 psig	1480 psig	3705 psig	275 psig	720 psig	1440 psig	3600 psig
200°F	260 psig	680 psig	1360 psig	3395 psig	235 psig	620 psig	1240 psig	3095 psig
300°F	230 psig	655 psig	1310 psig	3270 psig	215 psig	560 psig	1120 psig	2795 psig
400°F	200 psig	635 psig	1265 psig	3170 psig	195 psig	515 psig	1025 psig	2570 psig
500°F	170 psig	605 psig	1205 psig	3015 psig	170 psig	480 psig	955 psig	2390 psig
600°F	140 psig	570 psig	1135 psig	2840 psig	140 psig	450 psig	900 psig	2255 psig

- a. ANSI flanges per ASME/ANSI B16.5 - 2003.
- b. Flange temperature/pressure ratings only; seal temperature ratings may be lower. Refer to Table 10.
- c. The maximum working pressure with the non-metallic ptfe and PVC lower housing materials is 150 psig (1035 kPa) regardless of the higher allowable flange pressure range.
- d. ASME/ANSI Material Group 1.1; Linear Interpolation acceptable.
- e. ASME/ANSI Material Group 2.2; Linear Interpolation acceptable.

## Pressure Seals PSTAR and PSTAD

*Table 7. Pressure Seals PSTAR and PSTAD Pressure Limits (a)*

Process Temperature	Stainless Steel Bolts (Bolting Code S)		Carbon Steel and High Strength 300 Series SS Bolts (Bolting Codes C and H)	
	Diaphragm Codes 2 and 3	Diaphragm Code 4	Diaphragm Codes 2 and 3	Diaphragm Code 4
-20 to +100°F	1250 psig	750 psig	2500 psig	1500 psig
200°F	1075 psig	645 psig	2150 psig	1290 psig
300°F	975 psig	585 psig	1950 psig	1170 psig
400°F	900 psig	540 psig	1800 psig	1080 psig
500°F	835 psig	500 psig	1670 psig	1000 psig
600°F	760 psig	460 psig	1525 psig	920 psig

- a. Flange temperature/pressure ratings only; seal temperature ratings may be lower depending on mounting and fill fluid. Refer to Table 10.

The pressure rating is dependent on the diaphragm size and the bolting material. The diaphragm size and bolting material are identified in the pressure seal model number which is located on the pressure seal. See following example:

PSTAR-B32USSS1SAC14C  
 └── BOLTING CODE  
 └── DIAPHRAGM SIZE (IN)

## Pressure Seals PSISR and PSISD

The maximum working pressure is equivalent to a nominal 3- or 4-inch Schedule 40 pipe as defined by ASME/ANSI standards.

## Pressure Seals PSSCR and PSSCT

The maximum working pressure of the seal process connection varies with the clamping device used. Refer to Tri-Clover Tri-Clamp standards to determine the pressure limits of the clamping system that you are using.

## PSSSR and PSSST (Sanitary Tank Spud) Seals

The maximum working pressure of mini tank spud seal is 1.55 MPa at 120°C (225 psi at 250°F). That of the standard tank spud seal is 1.38 MPa at 120°C (200 psi at 250°F).

## Origin Code

The origin code identifies the area of manufacture and the year and week of manufacture. See Item E on the example shown in Figure 1. In the example, 2A means the product was manufactured in the Measurement and Instrument Division, 13 identifies the year of manufacture as 2013, and 25, the week of manufacture in that year.

## Operating Temperature Limits

The operating temperature limits of the electronics are -40°C and +85°C (-40°F and +185°F). The limits are -40°C and +75°C (-40°F and +167°F) for IAP10S and IGP10S transmitters with ATEX flameproof certification. Ensure that the transmitter is operated within this range.

The sensor body operating temperature limits are determined by the sensor fill fluid. The cover material, sensor diaphragm material and fill fluid are specified by two characters in the model code on the data plate. See Item A on the example shown in Figure 1. Also see Table 8 to interpret this part of the code and Table 9 to determine the sensor body temperature limits. In the example IAP10S-T22C1AA-L1, the number 22 identifies the fill fluid in Table 8 as silicone. Table 9 identifies silicone as having temperature limits of -46 and +121°C (-50 and +250°F).

*Table 8. Interpretation of Model Code for IAP10S and IGP10S Transmitters*

Code	Process Connector Material	Sensor Diaphragm Material	Fill Fluid
20	316L ss	Co-Ni-Cr	Silicone
21	316L ss	Co-Ni-Cr	Fluorinert
22	316L ss	316L ss	Silicone
23	316L ss	316L ss	Fluorinert
30	316L ss	Nickel alloy (a)	Silicone
31	316L ss	Nickel alloy <sup>(a)</sup>	Fluorinert
32	Nickel alloy <sup>(a)</sup>	Nickel alloy <sup>(a)</sup>	Silicone
33	Nickel alloy <sup>(a)</sup>	Nickel alloy <sup>(a)</sup>	Fluorinert

*Table 8. Interpretation of Model Code for IAP10S and IGP10S Transmitters (Continued)*

Code	Process Connector Material	Sensor Diaphragm Material	Fill Fluid

*Table 9. Sensor Body Operating Temperature Limits for Models Listed in Table 8*

Limiting Factor	Temperature Limits
Silicone Fill Fluid	-46 and +121°C (-50 and +250°F)
Fluorinert Fill Fluid	-29 and +121°C (-20 and +250°F)
Neobee Fill Fluid	-18 and +204°C (0 and 400°F) (a)
pvdf Inserts	-7 and +82°C (20 and 180°F)

a. At process connection

For transmitters with pressure seals, the temperature limits at the seals are shown in Table 10. The pressure seal fill fluid code is found in the pressure seal model code as shown in the following examples (fill fluid code position is underlined and bolded):

PSFLT	<b>PSFLT-B2S0153</b>
PSFPS and PSFES	<b>PSFPS-A2S013<u>34</u>E</b>
PSFAR	<b>PSFAD-D232SSS2SBC<u>13</u>M</b>
PSFAD	<b>PSFAD-D232SSS2SBC<u>1</u></b>
PSFFR	<b>PSFFR-A3S0E<u>314</u>B-FC</b>
PSFFD	<b>PSFFD-1S0<u>32</u>1</b>
PSTAR	<b>PSTAR-B32USSS1BCC<u>34</u>F</b>
PSTAD	<b>PSTAR-B32USSS1BCC<u>3</u></b>
PSISR	<b>PSISR-A23JSSS1SC<u>14</u>M</b>
PSISD	<b>PSISD-A23JSSS1SC<u>1</u></b>
PSSCR	<b>PSSCR-D21S<u>35</u>4H</b>
PSSCT	<b>PSSCT-B21S<u>55</u></b>
PSSSR	<b>PSSSR-B4S2<u>35</u>4H</b>
PSSST	<b>PSSST-B4S2<u>55</u></b>

*Table 10. Seal Fill Fluid and Operating Temperature Limits*

Code	Fill Fluid	Temperature Limits	
		Direct Connected (a), (b) PSFLT, PSFFD, PSFAD, PSTAD, PSISD	Remote Connected (b) PSFPS, PSFES, PSFFR, PSFAR, PSTAR, PSISR, PSSCR
1	DC200, 10cS, Silicone	-40 and +204°C (-40 and +400°F)	-40 and +204°C (-40 and +400°F)
2	FC77 Fluorinert	-59 and +82°C (-75 and +180°F)	-59 and +82°C (-75 and +180°F)
3	DC200, 3cS, Silicone	-40 and +149°C (-40 and +300°F)	-40 and +149°C (-40 and +300°F)
4	DC704 (HTF) Silicone	0 and +204°C (32 and 400°F)	0 and +304°C (32 and 580°F)
5	Neobee	-18 and +204°C (0 and 400°F)	-18 and +204°C (0 and 400°F)
6	Halocarbon 4.2	-45 and +160°C (-49 and +320°F)	-45 and +160°C (-49 and +320°F)
7	Syltherm XLT	-73 and +149°C (-100 and +300°F)	-73 and +149°C (-100 and +300°F)

a. Limited to 204°C (400°F) maximum regardless of fill fluid due to transmitter maximum temperature limits.

b. PSFAR, PSFAD, PSTAR, PSTAD, PSISR, and PSISD seals with ptfe gaskets are limited to 60°C (140°F).

## Process Wetted Materials

Refer to Table 8 to determine if the process cover and sensor diaphragm material are suitable for the process. For transmitters with pressure seals, seal wetted materials are listed in the following sections.

## Pressure Seals PSFLT and PSFPS

*Table 11. Pressure Seal PSFLT and PSFPS Wetted Materials*

Material Code	Material
S	316L ss
C	Nickel alloy (a)
T	Tantalum

a. Equivalent to Hastelloy® C. Hastelloy is a registered trademark of Haynes International, Inc.

The process wetted material code is found in the pressure seal model number which is located on the pressure seal. See following example:

PSFLT-B2S0153  
 └─SEAL WETTED MATERIAL

## Pressure Seal PSFES

*Table 12. Pressure Seal PSFES Wetted Materials*

Material Code	Material
S	316L ss
C	Nickel alloy (a)

a. Equivalent to Hastelloy® C. Hastelloy is a registered trademark of Haynes International, Inc.

The process wetted material code is found in the pressure seal model number which is located on the pressure seal. See following example:

PSFES-A2S21334H  
 └─SEAL WETTED MATERIAL

# Pressure Seals PSFAR, PSFAD, PSTAR, PSTAD, PSISR, and PSISD

*Table 13. Pressure Seal Lower Housing Materials*

Material Code	Material
S	316L ss
K	Carbon Steel
C	Nickel alloy (a)
T	Tantalum Plate
E	Titanium Grade 4
L	Inconel 600
M	Monel 400
N	Nickel 200
G	Glass Filled ptfe
P	Polyvinyl Chloride

a. Equivalent to Hastelloy® C. Hastelloy is a registered trademark of Haynes International, Inc.

*Table 14. Pressure Seal Diaphragm Materials*

Material Code	Material
S	316L ss
C	Nickel alloy (a)
T	Tantalum
E	Titanium Grade 2
L	Inconel 600
M	Monel 400
N	Nickel 200

a. Equivalent to Hastelloy® C-276. Hastelloy is a registered trademark of Haynes International, Inc.

*Table 15. Pressure Seal Gasket Materials*

Material Code	Material
S	Organic Fiber with Nitrile Binder
3	Silver Plated 316 ss
T	ptfe
B	Buna N
V	Viton
G	Grafoil
T	Silver Plated Nickel alloy (a)

a. Equivalent to Silver Plated Hastelloy® C. Hastelloy is a registered trademark of Haynes International, Inc.

The material codes are found in the pressure seal model number which is located on the pressure seal. See following example:

PSFAR-D232SSS1SA01A  
  
 GASKET MATERIAL  
 DIAPHRAGM MATERIAL  
 LOWER HOUSING MATERIAL

## Pressure Seals PSSCR

*Table 16. Pressure Seal PSSCR Diaphragm Materials*

Material Code	Material
S	316L ss
C	Nickel alloy (a)

a. Equivalent to Hastelloy® C. Hastelloy is a registered trademark of Haynes International, Inc.

The diaphragm material code is found in the pressure seal model number which is located on the pressure seal. See following example:

PSSCR-D21S354H  
└ DIAPHRAGM MATERIAL

The housing material is 316 ss.

The gasket is provided by the user.

## Pressure Seals PSSCT

The housing material is 316 ss.

The diaphragm material is 316L ss.

The gasket is provided by the user.

## Pressure Seals PSSSR and PSSST

The housing material is 316 ss.

The diaphragm material is 316L ss.

The gasket material is EPDM.
